Test scenario: Place Search functionality

Test case 1: Discover POIs near Bradford, UK

Test Steps	Expected Results	Actual Results	Pass/ Fail
Move the slider	A circle should appear on the map	As expected. Please refer to screenshot below	PASS
Centre the map at Bradford, UK, toggle on all buttons from POI toolbar	Up to 3 types of markers should appear now the map within a circle. If no result is found, a warning message will appear and search result is reset.	Refer to explanation below	FAIL

Regarding 'No result returned' and response afterwards...

3 different types of marker can coexist on the map however, 'Tourist Attractions' part of the toolbar does not work as expected. In this particular test for example, toggling casino before aquarium will result in search result resetting since there is casino but no aquarium within search radius. Whilst this outcome is as expected, if the order toggled reverses (i.e. aquarium is toggled first) the aquarium will remain checked after warning message until another 'no result returned' occurs, which is not intended.
